

All in one Solenoid Used on
E & F models of Bobkarts.
12 volt Cole Hersey 24450

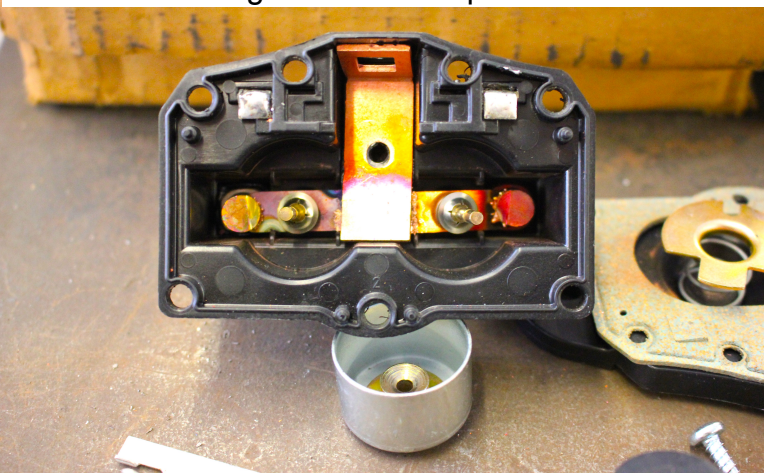

Wiring in Bobkart box, E & F models

Melting around nut of stud indicates that the load side was shorted or overloaded for a long period of time.

Inside the overloaded solenoid shows how the contact plate lost it's spring from over-heat and the contact on the right is arced inoperative.

This solenoid was melted internally from 24 volts being sent through it, caused by two 12 volt batteries being wired in series instead of parallel.
